

## Le Gradient Altitudinal Sur Les Sommets Tabulaires de Guyane

By Cesar Delnatte

Editions Universitaires Europeennes. Paperback. Condition: New. 264 pages. Dimensions: 8.7in. x 5.9in. x 0.6in. Bien que l'Amazonie soit essentiellement couverte par une forêt de basse altitude, elle possède quelques reliefs. Les travaux précédents ont montré que la Guyane en présentait deux types : les inselbergs et les sommets tabulaires sur roches basiques. Sur ces derniers, la végétation y est relativement uniforme entre les reliefs d'altitude et de nature géomorphologique comparables. Notre travail vise principalement à étudier la composition floristique le long d'un gradient altitudinal en s'appuyant sur plusieurs bioindicateurs. Amazonia is mainly covered by lowland forest, however it presents some reliefs. Previous works have shown two types of relief in French Guiana: Inselbergs and plateaus on basic volcanic rocks known as table mountains. Regarding the latter two, vegetation is quite uniform within mountains with comparable altitude and geomorphology. The present research deals mainly with studying floristic composition along an altitudinal gradient with several bioindicators. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.

### Reviews

*This written publication is wonderful. It really is loaded with knowledge and wisdom You will not really feel monotony at any time of your time (that's what catalogues are for relating to if you ask me).*

-- **Desmond Becker**

*Absolutely essential go through publication. I am quite late in start reading this one, but better then never. You will not feel monotony at any time of the time (that's what catalogues are for regarding if you ask me).*
